

Task – 1: Types of Peripherals and Their Real-Life Uses

Category	Type	Real-Life Usage
Printer	Inkjet Printer	Used for printing college work, assignments, and colorful photographs.
Printer	Laser Printer	Commonly used to print office reports, documents, and other text-based files.
Printer	3D Printer	Used for making prototypes, sample products, and small three-dimensional objects.
Scanner	Flatbed Scanner	Used to scan certificates, photos, and important documents.
Scanner	Sheet-feed Scanner	Useful for scanning several pages quickly in offices.
Webcam	Built-in Webcam	Used for online classes, video conferences, and virtual meetings.
Webcam	USB Webcam	Used for video calls, online streaming, and recording desktop videos.

Task – 2: Different Connection Methods

1. USB Connection (Wired)

A USB connection uses a **physical cable** to connect a peripheral device such as a printer, scanner, or webcam to a computer.

Example:

Computer → USB Cable → Printer

Main benefit: It provides a stable and reliable connection.

2. Wi-Fi Connection (Wireless)

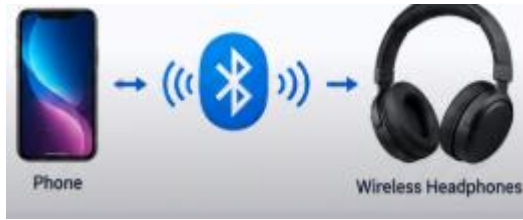

Wi-Fi allows devices to communicate **without using a physical cable** through a wireless network.

Example:

Computer/Laptop → Wi-Fi Network → Printer

Main benefit: Multiple devices can use the same printer or peripheral over the network.

3. Bluetooth Connection (Wireless)

Bluetooth provides a short-range wireless connection between compatible devices.

Example:

Laptop/Phone → Bluetooth → Wireless Headphones

Main benefit: Devices can be connected without using cables.

Task – 3: Comparison of Connection Interfaces

Connection Interface	Advantage	Disadvantage
USB	Provides a fast and stable connection.	A physical cable is required.
Wi-Fi	Wireless connection that allows multiple devices to access the same device.	Requires a working Wi-Fi network.
Bluetooth	Simple wireless connection without cables.	Has a shorter range and is usually slower than USB.

Task – 4: Connecting a Printer Using USB Cable

Device: Printer

Connection Method: USB Cable

Steps:

1. Switch on the **printer** and the **computer**.
2. Take a suitable **USB printer cable**, generally a USB Type-A to USB Type-B cable.
3. Insert the **USB Type-A connector** into the computer.
4. Connect the **USB Type-B connector** to the printer.
5. Wait for Windows to recognize the connected printer.
6. If Windows does not install it automatically, download and install the required **printer driver**.
7. Open **Settings → Bluetooth & devices → Printers & scanners**.
8. Check whether the connected printer is displayed in the printer list.
9. Select the printer and use the available **Print Test Page** option.

10. If the test page prints successfully, the printer is properly connected and ready to print documents and photos.
