

Task 1 – Check Windows System Information

On your Windows laptop or PC:

1. Press **Windows + R**.
2. Type **msinfo32**.
3. Press **Enter**.
4. The **System Information** window will open.
5. Find and check:
 - **OS Name / Windows Version**
 - **Processor**
 - **Installed Physical Memory (RAM)**
6. Take a **screenshot** showing these details.

Required Evidence: Screenshot of the System Information window.

Task 2 – Create a Bootable Linux USB

1. Download an official Linux ISO such as **Ubuntu** or **Fedora**.
2. Download and open **Rufus** or **BalenaEtcher**.
3. Insert a USB drive into the computer.
4. Select the downloaded Linux ISO.
5. Select your USB drive as the target device.
6. Start the process to create the **bootable USB**.
7. After completion, use the USB to start the Linux installation process.

If you do not have an extra USB:

You can use **VirtualBox** and install Linux inside a virtual machine using the downloaded ISO.

Required Evidence: Screenshot of the Linux ISO/bootable USB or Linux installation process.

Task 3 – Change Settings in macOS

This task requires a **Mac computer or macOS virtual machine**.

1. Open **System Preferences**.
2. Change the **desktop wallpaper**.
3. Open **Language & Region**.
4. Add or select **Hindi or Gujarati** as the system language.

5. Apply the changes.

Required Evidence: Screenshot showing the changed wallpaper and language settings.

If you only have a Windows laptop and do not have macOS, you cannot perform this task directly on Windows.

Task 4 – Create a gamer User in Ubuntu

1. Install **Ubuntu Linux** on a real computer or using a virtual machine.
2. During or after installation, create a new user account.
3. Set the username as **gamer**.
4. Enable **automatic login** for this account.
5. Restart Ubuntu.
6. Check the login screen and confirm that the **gamer** username is displayed.
7. Take a screenshot of the login screen.

Required Evidence: Screenshot showing the gamer username on the login screen.

Task 5 – Windows 10 Installation Guide

Create a step-by-step guide for installing **Windows 10**.

Your guide should include:

1. Installation Steps

- Create or prepare Windows 10 installation media.
- Boot the computer from the installation media.
- Start Windows Setup.
- Select language, time, and keyboard settings.
- Select the installation type.
- Complete the Windows installation.

2. Partitioning Tips

- Check the correct storage drive before modifying partitions.
- Back up important files before installation.
- Be careful when deleting or formatting partitions.
- Select the correct partition for Windows installation.

3. Post-Installation Settings

After Windows is installed:

- Check Windows Update.
- Install required drivers.
- Configure privacy settings.
- Set the correct date and time.
- Check network and display settings.
- Activate Windows if required.

4. Note Unclear or Missing Steps

While following the guide, write down any step that is:

- Difficult to understand
- Missing
- Different from what appears on your computer
- Not working as expected
